Description

Description:
The registration functionality currently allows users to enter email addresses with various formatting issues, potentially leading to invalid addresses. This can cause problems like failed communication (e.g., confirmation emails) and incomplete user profiles.

Steps to Reproduce:
Launch the Carrefour e-commerce app (or access the registration page on the website).
Enter a username in the name field.
In the email address field, enter an email address with one or more invalid formats.
Enter a password meeting complexity requirements.
Submit the registration form.

Expected Result:
The system should prevent registration attempts with invalidly formatted email addresses.

An error message should be displayed clearly stating that the entered email address is invalid (specifying the formatting issue).

Actual Result:
The system allows registration with the invalid email address.
An error message might be missing, or it might not address the specific formatting error.

Severity: Medium
Priority: Medium

Proposed Fix:
Implement robust email address validation during registration to check for proper formatting. This can involve using regular expressions or libraries to ensure the presence of "@" symbol, a valid domain name format (letters, numbers, hyphens, and periods) and no extra characters. Display a clear and informative error message during registration if the entered email address is invalid. The message should pinpoint the specific formatting issue (e.g., "Missing '@' symbol," "Invalid domain name") and guide the user to enter a valid email address.

Description

The registration functionality currently permits users to enter email addresses with potentially invalid domains during signup. This can lead to issues like failed communication (e.g., confirmation emails) and incomplete user profiles.

Steps to Reproduce:
Launch the Carrefour e-commerce app (or access the registration page on the website).
Enter a username in the name field.
In the email address field, enter an email address with an invalid domain. A domain is the text after the "@" symbol in an email address (e.g., "@gmail.com").
Enter a password meeting complexity requirements.
Submit the registration form.

Expected Result:
The system should prevent registration attempts with email addresses containing invalid domains.
An error message should be displayed clearly stating that the entered email address is invalid (specifically mentioning the domain issue).

Actual Result:
The system allows registration with the invalid email address.
An error message might be missing, or it might not explicitly address the domain issue.

Severity: Medium
Priority: Medium

As a new user, I want to register so I can access the app's full features. (ST3DD-1)

[ST3DD-39] Social login options (Facebook, Google) are missing from the registration functionality Created: 19/Apr/24 Updated: 21/May/24

Description

Description:
During GUI testing of the registration process in the Carrefour E-commerce App v1.0, it was discovered that social login options using Facebook and Google accounts are entirely absent from the registration form. This limits user registration flexibility and might discourage users who prefer social login methods.

Steps to Reproduce:
Launch the Carrefour E-commerce App v1.0.
Access the registration screen.
Observe the available registration methods.

As a new user, I want to register so I can access the app's full features. (ST3DD-1)

[ST3DD-38] The visual feedback for invalid credentials is missing or is unclear Created: 19/Apr/24 Updated: 21/May/24

Description

Description:
The login process fails to provide users with clear visual cues when entering invalid credentials
The current error messages or visual indicators might be unclear, making it difficult for users to understand why their login attempt failed.

Steps to Reproduce:
Launch the Carrefour e-commerce app (or access the login page on the website).
Access the login form.
Enter :
An invalid email address (e.g., non-existent email, typo)

An incorrect password
Submit the login form.

Expected Result:
The system should display a clear and informative error message near the relevant field (email and/or password) specifying the reason for the failed login attempt.
For invalid email: Message should indicate the email is not found or invalid.
For incorrect password: Message should state the password is incorrect.
Visual cues, such as a change in the input field color (e.g., red), should be present to indicate an error.

Actual Result:
The system displays an unclear error message or no message at all.
Visual cues might be absent, misleading or don't clearly highlight the problematic field.

As a new user, I want to register so I can access the app's full features. (ST3DD-1)

[ST3DD-37] The "Remember Me" checkbox doesn't exist in the login form

Created: 19/Apr/24 Updated: 21/May/24

Description

Description:

The "Remember Me" checkbox on the login form doesn't exist.
Selecting this checkbox doesn't keep users logged in across sessions as intended (referencing GUI-LOGIN-02, a test case likely verifying this functionality).

Steps to Reproduce:

Launch the Carrefour e-commerce app (or access the login page on the website).
Access the login form.
Enter a valid email address and password for a registered account.
Select the "Remember Me" checkbox (if applicable).
Submit the login form.

Close the app or browser window (log out).
Re-launch the app or revisit the website.

Expected Result:
Selecting the "Remember Me" checkbox should maintain the user's login state across sessions. Upon relaunching the app or revisiting the website, the user should remain logged in and avoid needing to re-enter credentials.

Actual Result:
The "Remember Me" checkbox doesn't exist in the login form. Users are required to re-enter their credentials on subsequent login attempts.

As a new user, I want to register so I can access the app's full features. (ST3DD-1)

[ST3DD-33] Registration form lacks the "Confirm Password" field. Created: 12/Apr/24 Updated: 23/May/24

Description

Description:

The registration process is currently missing a crucial field for password confirmation. Users can only enter their password once, increasing the risk of typos or inconsistencies during registration.

Steps to Reproduce:
Launch the Carrefour e-commerce app (or access the registration page on the website).
Observe the registration form.

Expected Result:
The registration form should include a field labeled "Confirm Password" positioned after the "Password" field.

Actual Result:
The "Confirm Password" field is absent from the registration form.

Proposed Fix:
Implement a "Confirm Password" field in the registration form. This field should allow users to re-enter their chosen password, ensuring it matches the one entered in the "Password" field. Display a clear error message during registration if the entered passwords do not match.

Justification:
The "Confirm Password" field is a security best practice that helps prevent accidental typos or inconsistencies during password creation. It adds an extra layer of security by ensuring users enter their desired password correctly.

As a new user, I want to register so I can access the app's full features. (ST3DD-1)

[ST3DD-29] Registration allows names/surnames exceeding the maximum character limit (20characters). Created: 12/Apr/24 Updated: 23/May/24

Description

Description:

The registration process currently allows users to enter names or surnames that exceed the intended maximum character limit.

Proposed Fix:

Display a clear error message during registration if the name or surname exceeds the maximum characters. The error message should explicitly state the maximum character limit for each field.

As a new user, I want to register so I can access the app's full features. (ST3DD-1)

[ST3DD-28] The system allows user to register when name/surname fields contain less than the minimum characters. Created: 12/Apr/24 Updated: 23/May/24

Description

The registration process allows user to register with names or surnames that fall below the minimum character requirement (minimum 3 characters).

Proposed Fix:

Modify the system to accept names/surnames that meet the minimum character requirement. Display a clear error message during registration if the name or surname falls below the minimum characters. The error message should explicitly state the minimum character requirement for each field.
